Abstract Objective To evaluate the clinical effects of Gelatamp colloidal silver gelatin sponge on the treatment of pericoronitis. Methods 227 patients with third molar pericoronitis were divided into two groups according to the clinical symptoms. Group A did not take oral antibiotic, and group B took oral antibiotic. Each group was divided randomly into experimental group (A1, B1) and the control group (A2, B2). The experimental group (A1, B1) used Gelatamp colloidal silver gelatin sponge in the deep soft tissue pocket, and the control group (A2, B2) used Iodine Glycerol once per day in the pocket for 3-7 days. The clinical effects were evaluated. Results The difference was observed between group Gelatamp colloidal silver gelatin sponge and group Iodine Glycerol in both group A and group B (P<0.05). Group Gelatamp colloidal silver gelatin sponge has better clinical effects than group Iodine Glycerol. Conclusion Gelatamp colloidal silver gelatin sponge in curing third molar pericoronitis can effectively improve the clinical symptom and clinical effects.
